SOFTWARE ENGINEER | FULL-STACK • CLOUD • AI

Early-career software engineer with a B.S. in Computer Science and hands-on experience building full-stack applications, AI-enabled features, and AWS serverless systems. Experienced with React, Node.js, Python, JavaScript, AWS, Terraform, databases, APIs, and software testing. Brings additional experience supporting data integrity, requirements-driven processes, and quality systems within an AS9100-regulated aerospace environment.

EDUCATION

Bellevue College — Bellevue, WA

Bachelor of Science in Computer Science | June 2025

Major GPA: 3.2

Relevant Coursework: Algorithms & Data Structures, Software Engineering, Operating Systems, Cloud Computing, Machine Learning, Database Systems, Web Programming, Computer Architecture, Programming Languages

EXPERIENCE

Quality & Production Data Support (IPI) | IDD Aerospace / Safran Group — Redmond, WA
December 2025 – July 2026

- Maintained and validated structured production and inspection data within an AS9100-regulated aerospace manufacturing environment, supporting data accuracy, traceability, and downstream engineering and production workflows.
- Investigated data discrepancies and production concerns, following documented procedures and requirements to maintain reliable records in safety-critical workflows.
- Created and maintained quality documentation, forms, and work packages while following Quality Management System (QMS) and configuration-management processes.
- Collaborated with quality inspectors, engineers, and production teams to identify issues and support accurate, requirements-driven outcomes.
- Performed in-process inspections using procedural checklists and technical documentation before components progressed through production.

Computer Science Competition Team Lead | Bellevue College — Bellevue, WA
December 2024 – June 2025

- Designed and developed programming challenges in Java, C++, and Python covering algorithms, problem solving, and programming fundamentals.

- Tested and debugged reference solutions to verify correctness, edge cases, and expected performance.
- Collaborated with team members to develop technical problems, documentation, and contest materials for students across multiple skill levels.

Open-Source Software Intern | Open Energy Dashboard — Bellevue, WA
January 2024 – February 2024; February 2025 – March 2025

- Developed and tested features for an open-source energy data visualization platform using JavaScript/TypeScript and Mocha/Chai.
- Debugged software issues, reviewed code, and followed version-control and collaborative development practices.
- Participated in distributed Agile-style development through stand-ups, team meetings, and technical discussions.

Research Assistant | Bellevue College — Bellevue, WA
November 2023 – June 2025

- Maintained and updated web applications and servers under faculty supervision.
- Troubleshoot webpages, forms, scripts, and links to maintain reliable web functionality.
- Created and optimized graphics, animations, and digital media for web deployment.

PROJECTS

Terraform Serverless Document Processor | AWS, Terraform, Python, GitHub Actions

- Designed and deployed a serverless document-processing architecture using **Amazon S3, AWS Lambda, DynamoDB, SNS, and CloudWatch**.
- Provisioned cloud infrastructure as code with Terraform and organized application logic using a dedicated source structure.
- Implemented event-driven processing triggered by object uploads and persisted processing metadata in DynamoDB.
- Used Git and GitHub Actions to support version control and repeatable development workflows.
- Documented infrastructure decisions, deployment planning, and validation through Terraform plan/apply workflows.

Interactive Speech Therapy Application | React, Node.js, Python, SQLite, OpenAI/Whisper API

- Developed a full-stack web application designed to support speech therapy activities and progress tracking.
- Built responsive React interfaces and Node.js backend components with SQLite data storage.

- Integrated Whisper/OpenAI APIs and machine-learning functionality to analyze speech and provide feedback.
- Designed separate patient and clinician workflows with an emphasis on accessibility, usability, and clear data presentation.

Personal Portfolio Website | Next.js, TypeScript, Tailwind CSS

- Designing and developing an interactive portfolio to showcase software engineering projects, technical skills, and professional experience.
- Implementing reusable components, responsive layouts, interactive UI elements, and modern front-end development practices.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C/C++, SQL, PHP, HTML/CSS

Frontend: React, Next.js, Tailwind CSS, JavaScript/TypeScript, Plotly.js

Backend: Node.js, Python, PHP, REST APIs

Cloud & DevOps: AWS, Terraform, Docker, GitHub Actions, CloudWatch

AWS: S3, Lambda, DynamoDB, SNS

Databases: SQLite, MySQL, MongoDB, DynamoDB

Testing & Development: Git, Mocha, Chai, VS Code, debugging, version control

Engineering: Software development, data structures & algorithms, machine learning, AI/API integration, data validation, requirements-driven development, QMS, AS9100-regulated environments
